Analysis

The index closed on a negative note as market continued its weak performance. As we mentioned before, it is important to stabilize above 29,700 level followed. If this scenario takes place, a strong rebound accompanied by high volumes should follow to confirm a higher low and the breakout above 30,300 points will then become the most likely scenario to happen. On the other hand, any confirmed breakout below 29,600 will put the most important support at 29,200 level in jeopardy.

Finally, focusing on outperformer stocks is the best decision at all times especially during non directional volatility periods. Our main stop loss is below 29,000.

EGX Small Caps Index/ EGX 70 Daily chart

Analysis

As we mentioned in yesterday's report, stabilizing above 8,300 will lead EGX70 to another rise and retesting 8,650 level is the most likely scenario to happen. The index closed above 8,300. Thus, we will monitor its close at the end of today's session, which represents the weekly close.

We recommend those who want to buy at current decline to avoid margin and placing their stop loss strictly below 8,100.

Resistance

No stocks broke their resistance

Support

No stocks broke their support

Testing

Resistance

EGAL 

Closed above 119.5. Thus, a confirmed breakout above this level at the end of today's session will be seen bullish and as an early signal to another breakout above 127.5 which will lead to more strong rises as hitting new highs. Major stop loss is below 103. EGAL is one of our top picks in 2025. Please review the annual report.

CCAP 

Closed above 2.45. Thus, a confirmed breakout above this resistance at the end of today's session will be seen bullish with a target at 2.65 initially. Only a breakout above the latter level will lead CCAP to more strong rise with target at 3-3.2 area. Short-term stop is below 2.15. CCAP is one of our top picks in 2025. Please review the annual report.

ATQA 

As we mentioned in our annual report, ATQA is outperformer and we expect the major rise to continue during 2025 with target at 8. on the short term, the rebound from above 5.05 level is bullish and will lead to retest 5.65 and the peak at 5.85. Short-term stop is below 4.95.

Support

Symbol	S. Description	Last	Buying Area	Selling Area 1	Selling Area 2	Selling Area 3	Stop Loss
--------	----------------	------	-------------	----------------	----------------	----------------	-----------

N.B. please note that the levels are too close as these trading opportunities only suit T+0 speculators

The prices that are accompanied by a green arrow in the above table show resistance levels. Thus, a break above these levels will pave the way to achieve one (or all) of the targets.

Guidelines

Bullish

Bearish

Neutral

Trend: (Upgrade, Downgrade): Change in trend color refers to upgrade or downgrade in the trend relative to the previous trend direction. E.g. change from “↓Down” to “↔ Flat” is considered an upgrade and vice versa.

- Buy: Buy the full position.
- P.Buy: Buy portion of a position
- Hold: Don't Buy or sell.
- P.SELL: Sell portion of a position.
- Sell: Sell the full position.
- Stop Loss: Completely exit the position (or) Re-entry in cases of Selling.

Tips on reading the report

The first page includes an analysis of two major indices in the Egyptian Stock Market; the norm is that we will analyze both the EGX 30 and 70, but sometimes we will compare the EGX 30 to its 50 counterpart if there is important information in this comparison. We also use the Hermes Last Index interchangeably with the EGX 30. The .HRMSL index has an important edge; it uses last prices instead of VWAP. First thing our clients should do is to read the indices analysis carefully to have a clear understanding on our overall view.

The second page includes stocks that broke out beyond their resistance levels, and those that violated their support levels. It also includes stocks that are testing their support levels and those that are testing their resistance. This analysis is important and it is the core of our recommendations. It is important to note though that not all stocks that are testing their support levels are bullish, and not all that are testing their resistance levels are bearish. To make it easier for our clients, we have placed a bull face 🐂 if we consider the stock under study bullish, and a bear face 🐻 if we consider it bearish. We also added a big bullet 🟩 if we are neutral .

It is important to note that you might find a stock that we consider bullish in our analysis (in the breakouts/testing section) but it remains as a hold or partial sell in the table. The conflict here is that the table is more conservative. This will not be an issue with our clients, because our analysis will explain why we are being bullish/bearish on the stock.
